## Questions

**Question-1: Countdown Blastoff (While Loop)** Create a program that simulates a rocket launch countdown using a while loop. Start from 10 and countdown to “Blastoff!” with a one-second delay between each countdown number. Print a message when the rocket launches.

**Hint:** You may want to use `cat` command to print the countdown and `Sys.sleep` for incorporating the delay

**Output preview:** Here is how the countdown could look like

**Solutions:**

```
# Enter code here
i <- 10
while(i>0) {
  cat(i, "...")
  i <- i - 1
  Sys.sleep(1)
}
```

```
## 10 ...9 ...8 ...7 ...6 ...5 ...4 ...3 ...2 ...1 ...
```

```
cat("\nBlastoff!")
```

```
##
```

```
## Blastoff!
```

**Question-2: Word Reverser (for Loop)** Develop a program that takes a user-entered word and uses a while loop to print the word’s characters in reverse order. For example, if the user enters “hello,” the program should print “olleh.”

**Hint:** You may want to use `substr` command to access each character of the input word, and `paste` command to join the reversed letters one at a time

**Solutions:**

```
# Enter code here
word <- "happy"
split_character <- c()
for(i in 1:nchar(word)) {
  split_character <- c(split_character, substr(word, i, i))
}
paste0(rev(split_character),collapse = "")
```

```
## [1] "yppah"
```
